

ABSTRACT

This invention provides a compound of the formula (I):

(I)

- 5 or the pharmaceutically acceptable salts thereof wherein X¹ and X² are halo; R¹ and R² are independently hydrogen or C₁₋₄ alkyl; R³ and R⁴ are each hydrogen or halo; and

R⁵ is

- (a) -C₃₋₉ diazacycloalkyl optionally substituted with C₅₋₁₁ azabicycloalkyl;
 (b) -C₃₋₉ azacycloalkyl-NH-(C₅₋₁₁ azabicycloalkyl optionally substituted
 10 with C₁₋₄ alkyl);
 (c) -NH-C₁₋₃ alkyl-C(O)-C₅₋₁₁ diazabicycloalkyl;
 (d) -NH-C₁₋₃ alkyl-C(O)-NH-C₅₋₁₁ azabicycloalkyl, the C₅₋₁₁
 azabicycloalkyl being optionally substituted with C₁₋₄ alkyl;
 (e) -C₃₋₉ azacycloalkyl optionally substituted with C₃₋₉ azacycloalkyl; or
 15 (f) -NH-C₁₋₅ alkyl-NH-C(O)-C₄₋₉ cycloalkyl-NH₂.

These compounds are useful for the treatment of medical conditions mediated by bradykinin such as inflammation, allergic rhinitis, pain, etc. This invention also provides a pharmaceutical composition comprising the above compound.
